

TOTE BOXES

Tote boxes are an absolute necessity if one is using a stitching room conveyer system, however they can make all your materials handling operations easier, from convey or transport and warehouse distribution to storage and inventory control. We offer a complete line of high quality, popularly-priced tote boxes for all industries. They are vacuum formed of high density polyethylene to resist shocks and abrasion as well as acids, alkalis, oil and grease. They won't split, chip, warp or peel and they are non-absorbent, non-toxic and non-allergenic. One piece seamless construction makes inner surfaces smooth and snag-free to protect contents—from delicate fabrics to heavy parts. Hand grips have no jagged edges to cut, scratch or splinter. Rolled top rims provide maximum rigidity and for extra strength, some styles have vertical ribbing to eliminate the risk of bowing when subjected to extreme loads or when stacked. Choose from styles that nest, stack and cross stack.
